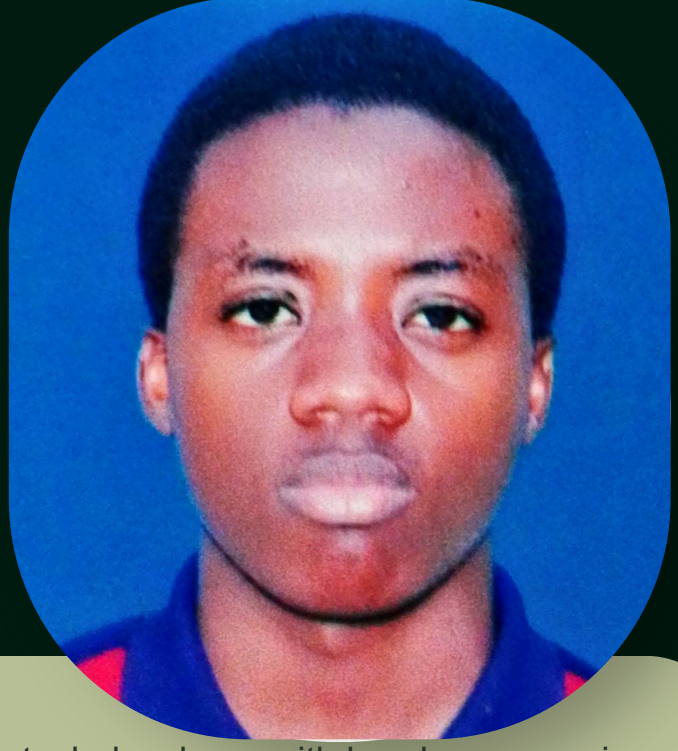
KELVIN.Y Bura

Penetration Tester | Red Tamer | Django & Python Developer | Mobile App Security Enthusiast



About Me

Ambitious and skilled cybersecurity researcher and full-stack developer with hands-on experience in web application development, penetration testing, and red team exercises. Strong foundation in Python, Django, Bash scripting, and mobile app development. Completed multiple CTFs, and actively developing security-focused projects in controlled lab environments. Passionate about building robust applications while learning advanced offensive security techniques.

Skills:

- Programming & Development
- Linux Fundamentals.
- Penetration Testing & Red teaming
- Automation scripting
- Foot printing & Malware Annalisis
- Cloud and Hosting

Education:

Bachelor of Cyber Security.
Institute of Accountancy of Arusha (IAA).
2023 -

Certificate In Computer Studies.
2023
ST Joseph Collage (Shinyanga Cumpus)

Advanced Certificate of Secondary Education.
Shinyanga Secondary School.
2021 - 2023

Certificate of Secondary Education.
Kom Secondary School.
2017 - 2020

Certificate of Primary Education.
2009 - 2016

Projects and Practice Experience:

CTF & Lab Work

- Sanifu, Meta CTFS, Hack The Box, TryHackMe
- Hands-on attack/defense challanges covering recon, OSINT, cryptography, privillage escalation and exploit development.

- Key labs:
- Recon & footprinting, web LFI/RCE excercises, binary & service exploitation, privilage escalation chains.

Automation & Scripting

- LFI Finder (python) - Automated scanner to discover Local File Inclusion Vectors across targes.
- PCAP Scanner - Scripted parasing automated of packet captures to extract sensitive information.
- System search Tool (Bash) - Fast recursive file/content search across filesystem for forensics and triage tasks

Development Projects

- Mini eCommerce platform - created a simple eCommerce platform to boost django understanding and learned django authentication, handled transactions via pesapal transaction gateways.

Language:

Kiswahili 94%

English 86%

Development Projects cont---

- WhatsApp and Telegram Boots - Used bot-Father for telegram to get APIs and Whats App cloud API's to create simple food ordering bots while connecting them to flask and django while exploiting the use of jwt tokens and Django restful framework

- Saas - Created a mini Saas multyternant platform with Django + PostgreSQL and learned the use of PostgreSQL and docker in the process.

- Kivy & Dart basics - Built simple mobile GUI apps and prototypes.

Malware Engineering & Reverse Engineering

- Custom Python Keylogger - A proof of concept keylogger for learning telemetry techniques.

- Ghidra practice for reverce engenearing and static binary analysis.

Hosting

- Used contable VCPU's, domains from namecheep and practiced hosting by setting up redis to boost performance in speed, session management and queue management also practiced Setting up Web Application Firewalls in my local machine using ModSecurity + OWASP CRS
